Mockup Review Notes

Project Title: Marie Curie

Hi Sophie,

Your mockup looks amazing so far and I love how the color scheme, font style, and layout conveys the concept and sets a historical and admirable tone. I like how the side bar being used (if I'm interpreting the arrow correct, it appears that it should just come out when clicked) for effective navigation between subpages; it seems like it'll probably translate well to more narrow and mobile pages. I'm also a super big fan of how the "legacy" page seems to be done with the left and right arrows for different prizes; I think it's so fitting as it looks like a "trophy case."

Overall, I would like there to be more images on the subpages to help illustrate different parts of her life (right now the pages that only have text may seem too "boring" and dense). Some more specific detailed changes are listed below:

- For the home page, I'm finding it a little awkward that the top grey header region is not being utilized and so it's not effectively showing the topic right away. Maybe put "Marie Curie" up there for greater cohesion with the other pages
- I'm not sure what the the magnifying glass symbol is supposed to signify (it looks like you could "search" for something)
- For the "Early Years" I would like more visual elements (maybe pictures of her birth city on a map, the school that she went to, childhood photos of her). I think this would help break up the text.
- For the "New Elements" page, I'm thinking it would be cool to include the periodic table with the two elements that she discovered (radium and polonium) highlighted. This would help visually convey her discoveries.
    - The year and the picture detail is a nice touch!
- I do like the font for the subpage headers (the ones in the burgundy) but I'm concerned it might be too thin(?) and so it may come off as low contrast.
- I would like the menu subpage titles to be a little spaced out a little bit more (or adjust accordingly to the screen height) and have a little bit more margin on the left and right side.

I'm so excited to see this site coded. Feel free to Slack message me if you have question or would like input on anything.
